

# TimeLinx™ SmartMobile™

TimeLinx is a CRM-based application that improves service operations while building customer rapport.

**TimeLinx simply makes cents™**

*TimeLinx SmartMobile™ for field teams enables the quick and easy capture of employee and contractor activities on any mobile device or web browser.*

Streamlined for quick entry, TimeLinx provides easy and accurate collection of timesheet data including automated calculation of rates and costs using a complex behind-the-scenes pricing matrix, expenses and task activities with synchronization to many popular accounting systems. Eliminate typing errors and cash collection delays forever!.

#### Core Features

- Record time against projects
- Accurately track billable & non-billable time
- Enter & track expenses like travel and mileage
- Record HR data such as vacation time & holiday time
- Rapidly work on multiple customer projects at once

Users can easily record and submit time in a user-friendly browser or mobile interface. Time can be captured wirelessly on-the-go which synchronizes directly into the main hosted TimeLinx project application. All transactions are automatically routed into a multi-tiered approval process with audit trails for real time visibility. They are instantly calculated to maximize profit and provide management with visibility into that profit in real-time.

Direct integration with accounting systems means that job cost modules can still be used but are no longer necessary as TimeLinx takes over these functions. The TimeLinx Accounting Package will then port all data into your accounting system's various modules. TimeLinx with SmartMobile™ eliminates duplicate data entry, reduces errors, eliminates the need to maintain information in multiple systems, and speeds up your quote-to-cash lifecycle.

#### Product Highlights

- Rapid and easy time and expense entry
- Multiple approval levels
- Automated alerts to notify of activities
- "Assigned tasks" option limits user access
- Customizable minimum and incremental time calculations
- Multi-language capable
- Integration to popular accounting systems
- Instant profitability calculations
